

Executive Summary

WaveMart - Ethiopia's Premier Real Estate Marketplace

A unified, Ethiopia-first PropTech platform: marketplace, communication, payments and trust in one app

15

Total features

Flutter / Laravel

Tech surfaces

EN / AM / TI

Languages

Production

Status

1. The opportunity

Ethiopia's residential property market is large, fragmented and underserved by digital infrastructure. Listings are scattered across Facebook groups, Telegram channels and physical bulletin boards. Verification is non-existent, communication happens off-platform and there is no reliable way to discover professional agents. WaveMart solves all three problems with a single mobile-first platform.

MARKET SIZE

Real estate contributes ~13% of Ethiopian GDP. Even capturing 1% of addressable listings on a paid SaaS model puts WaveMart on a clear path to multi-million-dollar ARR within 36 months of monetization.

2. Product surface

#	Feature	Why it matters
01	Authentication & OTP Login	Phone-first, passwordless, multi-language
02	Property Listings	Polymorphic house / land with rich media and lifecycle
03	Home, Search & Filters	Featured + VIP + Recent feeds, full-faceted search
04	Favorites	One-tap bookmarks with engagement telemetry
05	In-app Messaging	Buyer-seller chat with FCM-driven live updates
06	Video Calls (Jitsi)	In-app property tours with push ring screen
07	KYC Verification	Mandatory identity verification (the trust moat)
08	Subscriptions & Plans	Free / Basic / Premium / Professional with capability flags
09	Payments (Chapa)	Single gateway for all paid actions, ETB-native
10	Orders & Matching	Buyer demand capture with automated listing matches

11	Interest Requests & Leads	Conversion pipeline with 6-stage tracking
12	Notifications & Push (FCM)	Inbox + push + incoming-call ring screen
13	Profile & Account	Self-service identity and public profiles
14	Help Center & Support	Knowledge base + ticketing with CSAT
15	Localization & Address	EN / AM / TI + Region / Zone / Woreda / Kebele + Ethiopian calendar

3. Technology stack

Layer	Stack
Mobile	Flutter 3, Riverpod, go_router, Dio, Hive, flutter_secure_storage
Backend	Laravel 12, PHP 8.2, MySQL, Sanctum, Reverb (WebSockets)
Auth	OTP-based, passwordless; identifier is phone_number
Push	Firebase Cloud Messaging (kreait/laravel-firebase)
Payments	Chapa (ETB) - Telebirr, CBE Birr, cards, wallets
Video	Jitsi (JaaS for production, self-hosted for staging)
Video processing	GitHub Actions worker (wavemart-video-optimizer)
Localization	Flutter ARB + DB translation loader; EN / AM / TI
Calendar	andegna/calender for Ethiopian dates
Frontend (web/admin)	Blade + Alpine.js + Tailwind + DaisyUI
Infra	InfinityFree (prod), GitHub Actions CI / CD

4. Business model

WaveMart uses a four-stream monetization model: (a) tiered subscription plans, (b) pay-per-listing promotions (Featured, VIP), (c) value-added services like on-site physical verification, and (d) - planned for Phase 3 - transactional lead-gen commissions for high-value deals. Pricing is in ETB and all payments flow through Chapa, removing friction for local users.

MOAT

WaveMart's competitive moat is structural: KYC + Ethiopia-native address + verified subscriptions + Chapa-native payments + local language support. A foreign competitor would have to rebuild all five layers.

5. Where we are

Area	State
------	-------

Mobile app	Production release on wavemart.et (Android arm64 + arm)
Backend	Production on InfinityFree via FTP GitHub Actions pipeline
Admin	ERP-style admin dashboard (Blade + Alpine + DaisyUI)
Database	MySQL in prod, SQLite in-memory in tests
Locales	EN / AM / TI fully translated
Payments	Chapa live in production
Video calls	Jitsi in production
Video processing	GitHub Actions worker deployed, polling UI in app

6. Roadmap

Phase	Initiative
Phase 1 (current)	Addis Ababa + regional hubs (Mekelle, Adama, Hawassa); agent onboarding.
Phase 2	VR property tours, advanced lead routing, mortgage partner integrations.
Phase 3	B2B agent SaaS, transaction fees on high-value deals, cross-border listings.

7. What this package contains

This folder contains 15 individual feature PDFs, one per capability. Each is written as a standalone investor-grade document with capabilities, flows, tech surface, API surface and 'why it matters' callouts. Together they form a complete product walkthrough that an investor can read in any order.
