

Property Listings

Property Listings

Polymorphic, Ethiopia-aware property listings with media, promotions and lifecycle management

Category: **Core Marketplace** | Polymorphic: **House / Land** | Status: **Production**

House / Land Types	Free / Lease / Coop Holding	Sale / Rent Intents	Images + Video Media
------------------------------	---------------------------------------	-------------------------------	--------------------------------

1. What it is

The central marketplace object. A **Listing** in WaveMart is a polymorphic record that owns either a **House** or a **Land** property, with a dedicated **holding detail** (Free Hold, Lease Hold, or Cooperative) and rich media. The model captures the way real estate is actually transacted in Ethiopia, including legal nuances like tax-paid-until-year and lease price per square meter.

2. Lifecycle

01 Draft (mobile) A	Multi-step wizard with Hive-backed draft auto-save; users can pause and resume.
02 Submit B	FormData with up to 150MB of images / site plan / ownership proof / video.
03 Backend moderation C	ListingObserver + admin review; status moves through pending -> active (or rejected).
04 Active on Home D	Surfaced in featured, VIP and recent feeds; appears in user search and category browse.
05 Promote E	Sellers can mark a listing as Featured (paid) or VIP for prioritized placement.
06 Close F	Sold, Rented, Rejected, or Frozen (after subscription expiry).

3. Capabilities

Capability	What it does
Multi-step create wizard	Type -> Holding -> Use -> Location -> Details -> Media -> Review.

Polymorphic properties	House-specific fields (rooms, bedrooms, kitchens) and Land-specific fields (sqm, frontage).
Holding-type system	Free Hold, Lease Hold, Cooperative - each with its own validation and price model.
Address hierarchy	Region / Zone / Woreda / Kebele cascading dropdowns (Ethiopian admin structure).
Draft auto-save	Hive-backed draft persistence per user; resume from any step after app kill.
Edit & resubmit	Full PUT-style update including add/remove images and replacing the site plan.
Delete with cascade	ListingObserver removes related House / Land, holding details, leads and favorites.
Featured & VIP	Two promotion tiers, gated by subscription plan and counted per period.
Reveal contact	Buyers can pay with subscription credit to unmask seller phone/email.
Similar listings	Backend computes related listings by type, location and price band.
Views & analytics	View counter increments and per-listing analytics for owners.
Video pipeline	Video upload triggers a GitHub Actions worker; the app polls /listings/{id}/video-status.

4. Investor relevance

WHY IT MATTERS

Listings are the supply side of the marketplace. By modeling the Ethiopian-specific concepts of holding type, Woreda / Kebele and lease price per sqm, WaveMart creates a data moat: any competitor would need to re-architect for these local primitives, not just clone the front end. The polymorphic design also lets us add new property categories (commercial, vehicle) without schema rewrites.

5. Key files

Component	Location
Listing model (mobile)	lib/data/models/listing.dart (23 KB, 648 lines)
Listing service	lib/data/services/listing_service.dart (26 KB)
Create wizard	lib/presentation/screens/listing/create_listing_screen.dart
Edit wizard	lib/presentation/screens/listing/edit_listing_screen.dart
Detail screen	lib/presentation/screens/listing/listing_detail_screen.dart (75 KB)

My listings	lib/presentation/screens/listing/my_listings_screen.dart
Home feed	lib/presentation/screens/home/home_screen.dart
Backend model	WaveMart/app/Models/Listing.php
API controller	WaveMart/app/Http/Controllers/Api/ListingController.php (1,157 lines)
Cascade observer	WaveMart/app/Providers/AppServiceProvider.php (ListingObserver)

6. API surface

```

GET /api/listings paged, filterable browse
GET /api/listings/featured home featured carousel
GET /api/listings/vip-listings VIP home carousel
GET /api/listings/{id} full detail (subscription-gated)
GET /api/listings/{id}/similar related listings
GET /api/listings/{id}/video-status polling for video processing
POST /api/listings create (multipart, 150MB cap)
PATCH /api/listings/{id} edit (with method override)
DELETE /api/listings/{id} cascade delete
POST /api/listings/{id}/feature promote (paid)
POST /api/listings/{id}/vip promote (paid)
POST /api/listings/{id}/reveal-contact unmask seller (gated)

```
