Home, Search & Filters

Composable discovery surface with featured, VIP and recent feeds plus faceted search

Category: **Discovery** | Server: **Laravel 12** | Status: **Production**

Featured / VIP / Recent Feeds	3 presets Sort modes	Type, intent, price Filters	Server-driven Pagination
---	--------------------------------	---------------------------------------	------------------------------------

1. What it is

The home tab is the first surface a user sees after login. It composes three feeds (Featured, VIP and Recent), exposes a full search/filter system, and adapts to the user's subscription (VIP listings are only shown to users with the appropriate plan). All copy is localizable and a rental toggle is hidden when the system setting is off.

2. How it works

01 Bootstrap 1	Home pulls /settings to learn rental_enabled, /subscriptions to learn canViewVip, /listings for the main feed.
02 Featured carousel 2	GET /api/listings/featured - pinned by the seller, 12 per page.
03 VIP carousel 3	GET /api/listings/vip-listings - rendered only if canViewVip; gated by plan.
04 Browse grid 4	GET /api/listings with filter, sort, type, intent, price min/max.
05 Search debounce 5	Text input is debounced (~400ms) and applied as a search term to the same endpoint.
06 Pull-to-refresh 6	Refreshes all three feeds in parallel and animates a refresh pill.

3. Capabilities

Capability	What it does
Featured carousel	Top-of-page horizontal scroll of admin/seller featured listings.
VIP carousel	Subscription-gated high-value listings, only for entitled users.
Inline search	Debounced text search with no full-screen takeover.

Filters	Type, listing_type, price min/max, price label presets, sort mode.
Sort	newest, price_asc, price_desc.
Pagination	Infinite scroll with pull-to-refresh.
Favorites shortcut	Heart icon on every card with optimistic toggle.
Settings aware	Reads /settings to hide rent intent, show force-update banner, etc.
Animations	Header fade-in, refresh-pill, list-item entry animations.

4. Investor relevance

WHY IT MATTERS

Home is the funnel. By combining three carousels (free featured, paid VIP, organic recent) we monetize impressions without hurting discovery. Subscription gating of VIP is a clear, visible value demonstration that converts free users to paid plans.

5. Key files

Component	Location
Home screen	lib/presentation/screens/home/home_screen.dart (1,716 lines)
Listings provider	lib/presentation/providers/listing_provider.dart
Filter/sort state	Managed locally + pushed to API as query params
