

# Interest Requests & Leads

# Interest Requests & Leads

Conversion pipeline that captures, attributes and tracks buyer interest across the funnel

## 1. What it is

A Lead is the audit-trail record of a buyer's interest in a property. WaveMart captures leads from two places: (a) explicit 'I'm interested' actions on a listing and (b) automated suggestions matched against an Order. Leads have a lifecycle stage (new, contacted, negotiating, offer, won, lost) and are visible to the buyer, the seller and the admin team.

## 2. How it works

|                              |                                                                            |
|------------------------------|----------------------------------------------------------------------------|
| <b>01 Express interest</b> 1 | POST <code>/api/listings/{id}/interest</code> with optional buyer message. |
| <b>02 Auto-suggest</b> 2     | OrderMatchingService creates suggestion leads automatically.               |
| <b>03 Inbox</b> 3            | GET <code>/api/my-interests</code> returns all of the user's leads.        |
| <b>04 Admin moderation</b> 4 | Admin moves the lead through stages with internal notes.                   |
| <b>05 Conversion</b> 5       | On 'won', the related listing is marked as sold / rented.                  |
| <b>06 Cancel</b> 6           | DELETE <code>/api/my-interests/{id}</code> withdraws the lead.             |

## 3. Capabilities

| Capability        | What it does                                                          |
|-------------------|-----------------------------------------------------------------------|
| Express interest  | One-tap from any listing with optional message.                       |
| Order suggestions | Auto-generated leads with accept/decline actions.                     |
| Stage tracking    | 6-stage pipeline for sales analytics.                                 |
| Listing snapshot  | Each lead embeds the listing (and optionally the order) it refers to. |

|                          |                                                      |
|--------------------------|------------------------------------------------------|
| <b>Public visibility</b> | Buyer and seller can both see lead status.           |
| <b>Admin pipeline</b>    | Admin can reassign, contact, set won / lost reasons. |
| <b>Notification</b>      | Lead status changes trigger FCM notifications.       |

## 4. Investor relevance

### WHY IT MATTERS

Leads are the conversion engine. They turn passive browsing into measurable, attributable demand and unlock future revenue models like pay-per-lead, premium agent tools, and B2B partnerships with mortgage providers.

## 5. API

```
POST /api/listings/{id}/interest { message? }
GET /api/my-interests?page=1 paged list
DELETE /api/my-interests/{id} cancel
GET /api/orders/{id}/suggestions for an order
PATCH /api/orders/suggestions/{id}/accept accept match
PATCH /api/orders/suggestions/{id}/decline decline match
```
