

Profile & Account

FEATURE 13

Profile & Account

Self-service identity, public profiles and account lifecycle

Category: **Identity** | Server: **/api/profile** | Status: **Production**

Listings / Favs / Inbox Stats	5 fields Edit fields	Yes Public profile	Soft Delete
---	--------------------------------	------------------------------	-----------------------

1. What it is

The profile module covers everything a user can do with their own identity: view personal stats, edit basic fields, delete their account, and inspect other users' public profiles. Public profiles are reachable from listing cards, chat headers and lead records.

2. How it works

01	Open account	1	GET /api/profile returns the user + their stats (listings, favorites, unread).
02	Edit	2	PATCH /api/profile with changed fields.
03	Public view	3	GET /api/users/{id} returns the public version of a profile.
04	Delete	4	DELETE /api/profile (soft) revokes the account.

3. Capabilities

Capability	What it does
Profile stats	Total listings, total favorites, unread messages.
Editable fields	First / last name, gender, email, avatar.
Public profile	Public endpoint shows listings and rating without exposing private data.
Soft delete	Account deletion is reversible by admin if needed.
KYC integration	Profile embeds KYC status and surfaces a 'Verify now' call-to-action.

4. Investor relevance

WHY IT MATTERS

Profiles anchor trust. Showing KYC status, rating and a public listing history turns an anonymous marketplace into a community of identifiable, accountable participants.

5. API

```
GET /api/profile user + stats
PATCH /api/profile update fields
DELETE /api/profile soft delete
GET /api/users/{id} public profile
```
